

Client feedback

From the client feedback (Appendix 4), the program achieves the purpose of the development. The program has user-friendly interfaces and easy visual representation of information, as mentioned by Ms Dean. Additionally, the client stated that high compatibility with various devices was another outstanding feature of the product. Yet, the client recommended a monthly report for the student's performance in submitting their locations for the staff's evaluation of students.

Evaluation

The table below shows the achievements of each success criterion based on the test plan in criterion B.

Success Criteria	Tested	Fulfilled (Yes/No)	Comments
1	✓	Yes	Works well; Staff-only pages are blocked from student accounts
2	✓	Yes	-
3	✓	Yes	Works well for both location data and student details
4	✓	Yes	-
5	✓	Yes	-
6	✓	Yes	-
7	✓	Yes	3 times on Saturday, 2 times on Sunday

Recommendation for further development

To improve the usability of the program for further development, including a function and database to enter brief notes about the students will benefit the staff. As the administrator account user enters and views the notes of the students, it would remove the inconvenience of the staff going through small physical notes for specific information. The client, Ms Dean would want this functionality to be implemented to the program as she mentioned in the feedback interview session.

Moreover, adding an email reminder system would improve the accessibility of the program when students forgot to enter their location at pre-allocated times. Then, the staff does not have to individually remind the students to register, hence the improved program will enhance the client's experience while using the program.
